Re: Air Quality Testing
School Campus, Community Integration Center, & Adult Living Homes

To Whom It May Concern:

The Vista School retained EHC Associates, Inc. (EHC) to perform an air quality investigation and sampling of the school campus, the community integration center and the four adult living homes. The investigation and sampling was performed to provide The Vista School with continued annual air monitoring of its buildings and schools.

The investigation and sampling was performed throughout the Elementary School, Middle School, Junior High, and High School along with the community integration center and four adult living homes in the area. The sampling was completed during the summer recess in June and second week of July. No students were present on campus at the time of testing.

Air samples were collected using a bio-aerosol sampling pump; samples were collected from random classrooms, offices, and common spaces throughout the campus and from each floor of the four adult living homes.

Samples were shipped under chain-of-custody procedures to AmeriSci Bio-Chem Laboratory – AIHA Accredited 175122 – for analysis of non-viable fungal spore count and genus ID.

Laboratory analysis confirms, at the time of sampling, that mold spore counts are currently within acceptable ranges (indoor compared to outdoor). Further sampling will be performed on an annual basis, or as needed if a water intrusion issue occurs.

Should you have any questions related to this sampling event and investigation, please contact The Vista School.

Sincerely,

Edward "Ted" Gallagher
